

Thermostatic Mixing Valve

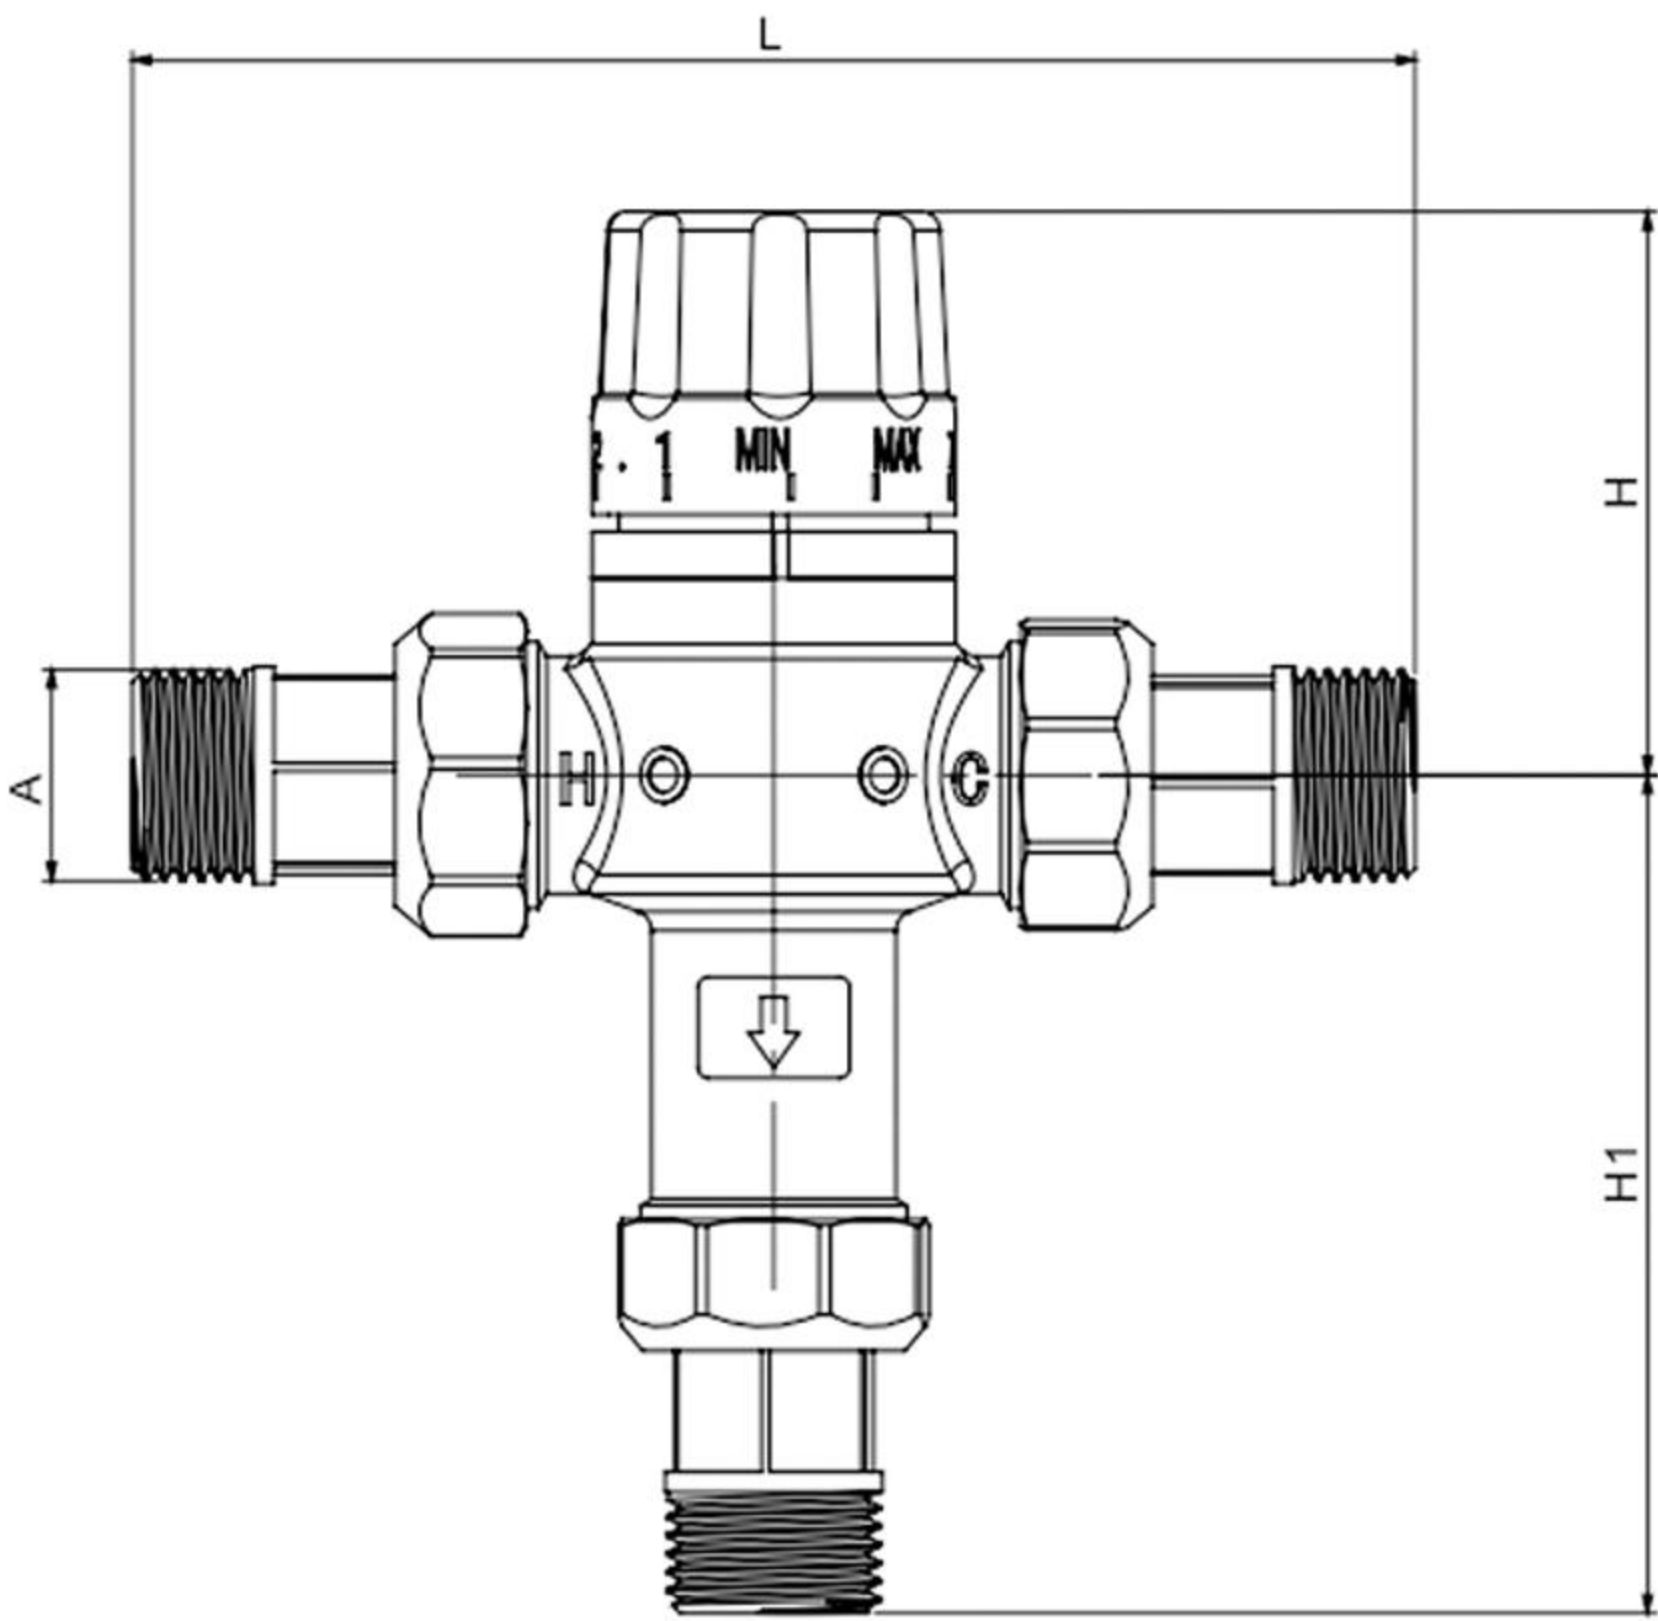

Function:

The main function of the thermostatic mixing valve is to prevent scalding, provide safety protection, and maintain constant temperature..Through the mixing valve, the high temperature hot water is changed to directly useable domestic hot water (constant temperature range:30~50C),providing a safety protection function for the modern household hot water system.

Technical specification:

Medium
water
Temperature control range
30~50℃
Max.pressure
10bar
Kvs
1.5 m/h

Structure size:

	A	L	H	H1
DN15	G 1/2"	127	56	83
DN20	G 3/4"	131	52	81
DN25	G 1"	160	63	100
